

PRODUCTS: **HIGHBUILD S-200 & TROWELGRADE B-400**

APPLICATION: **LOW SLOPE ROOFING MEMBRANE**

APPLICATOR: **Manor Renovations**

CLIENT: **Home Owner** LOCATION: **Calgary, Alberta**

PROJECT SIZE: **450 sq ft** COMPLETION DATE: **2012**

Project Description

During a renovation, the home owners wanted to replace their failing front porch balcony.

Challenge

For a small area it is difficult bring in large equipment to achieve the waterproofing results needed. The home owners did not want any fire hazards associated with torch on roofing.

Liquid Rubber Solution

Using a combination of HighBuild S-200, TrowelGrade B-400 and re-enforcing fabric, Manor Renovations built up the required 80 mil DFT by brush and rollers. 6" Re-enforcing Fabric and HighBuild S-200 were used to prepare the 90 degree angles. HighBuild S-200 and 40" Re-enforcing Fabric were used for the field work and B-400 was used to smooth out lips and provide a cant strip on the finished 90 degrees. The home owners now have a fully adhered, seamless roofing system for years to come.
